

Since 1990 up today UNION company is the market leader in the production of doors and furniture.

UNION always strive for excellence, concentrating its efforts on finding new ideas, implementing European quality standards, enlarging the product range and introducing the latest trends in architecture and interior design.

Being an expert in interior doors and partitions development, in 2020 UNION launched to the market a new comprehensive approach to interior design.

The concept of "Doors and furniture in the same style" was developed by Italian architects on request and in collaboration with UNION. This solution makes easier implementation the ideas of architects working out an interior and guarantees the stylistic unity of all elements in the design project.

UNION company production was established according to the project of Italian architects based on the latest achievements of the Italian furniture industry. Our advanced production complex operates on more than 40,000 sqm and equipped with modern Italian and German hardware matching fulfillment of any complexity orders in the required volume. Majoring the implementation of complex interior solutions, the UNION company has reached the highest level of the development, thanks to the knowledge of the Italian door and furniture manufacturing traditions, the involve of European experience, technologies and equipment, as well as understanding the customers needs and constant improvement of products and services.

SIZE MATTERS

Thickness of UNION door up to **60 mm**

It's **50%** thicker
than an standard door

02

Important advantage - door leaf thickness

As a rule, the door leaf thickness of other manufacturers does not exceed 40 mm. The leaf thickness of UNION doors is 60 mm. Such doors have better sound insulation and durability. Besides all, they look prestigious and give the solidity to the interior.

04

Height up to 3.5 meters

Modern trend, relevant for interiors made in different design. They lift up the ceilings, visually enlarge the room space. Reinforced frame and door leaf structure provides the strength and stability during a long-term operation.

01

Always in stock. Invisible doors ready to for painting

Always in stock, ready for quick shipment, unique FILO-60, Fondo doors with 60mm thickness in standard sizes 60/70/80 x 200/210/240 cm.

03

Hidden frame with false frame

Hidden INVISIBLE frame is totally made from aluminum and it is reinforced by false frame - the additional secondary profile. That's the main difference between the constructions of UNION hidden frames from any standard hidden frames in a market. The rigid reliable construction is designed for long and intensive operation, including for heavy doors. Initially the frame is anodized in silver aluminum, but it can be also painted in a wall color or in any color according to the factory catalogue.

05

Complanarity

NVISIBLE hidden frame is integrated in a wall and creates one plane at "pull opening" and "push opening" door. Moreover, it's convenient to add the wall panels from different materials (from wood to glass) to this frame. In any case the complanarity has place - the solidity of surface with wall without protuberances.

06

Wall thickness

There are thin walls made from special materials in construction of some buildings. INVISIBLE frame is ideal for wall mounting from 6 cm thickness. The frame is installed in a thin wall without using a false frame and fixed via frame profile.

07

Delivery of the assembled frame

The INVISIBLE hidden frame can be delivered fully assembled. It means that the frame is assembled with fixed mounting bars ready to be installed in the doorway. The installers can only set it vertically and fix it to the slopes opening. Thus the installation becomes faster and easier.

08

Aesthetic mounting

The INVISIBLE frame design allows you to create a joint with the tiles, the porcelain tiles or other materials directly tightly, without additional transitional elements and visible gaps. Such a technical solution is specifically provided for doors on hidden frame of both internal and external opening.

09

Support

There are longitudinal grooves in the profile of the false frame. The tool carriages are installed in these grooves. It is a special fixing device that allows adjusting quickly the frame position by level and then fastening securely the whole construction. It accelerates and simplifies the installation process. Minimum 4 tool carriages are installed in each vertical wall stand of INVISIBLE frame (there are always two of them).

10

Suitable for standard doorways

According to international standards, the door's width 60, 70, 80 and 90 cm are standard. As a rule, many builders prepare the doorways exactly in accordance with those standards. UNION hidden frame doors are designed the way that their geometric dimensions fit into standard doorways that significantly reduce their cost.

11

Humidity resistance

Aluminum INVISIBLE frame makes a door humidity resistant, in contrast to the doors on wood or MDF frame. UNION doors are not exposed to humidity during the wet cleaning or at the wet floor. They can be used in high humidity rooms without fear of wet support structure - the frame.

12

Fabricability

INVISIBLE hidden frame are supplied with a special supporting net along the whole aluminum frame perimeter. This is the important detail when a wall is plastered close to the frame and then painted. The net simplifies the plastering process and excludes the cracks of the wall surface.

13

Solidity of finishing

There is a very interesting and trendy option in UNION - the possibility of factory polymer painting in the same color of all metal elements of the door structures. The solidity of finishing of aluminum tip edge, frame and handles create a unique aesthetic integrity and laconism.

14

Rabbeted door

UNION produces the unique 60 mm doors with so-called rabetted ledge. Sometimes we use the terms "doors with groove" or "framed-and-ledged doors" instead of "rabbeted doors". Thanks to the ledge, the door leaf connects better to the frame that increases the sound and heat insulations. Due to the ledge the door becomes flush at different door handing - "pull opening" and "push opening". The ledge also prevents the light penetration in another room.

15

Aluminum - Low footprint

Aluminum is a natural, eco-friendly and safe material that is not exposed to the environment. Such materials as wooden board, MDF have a number of fundamental defects - they trigger and swell on wetting. There are the doors with PVC elements in a market. This material is very harmful for humans.

UNION CONTRACT

PRODUCTION AND SUPPLY OF DOORS AND
FURNITURE TO VARIOUS BIG PROJECTS

UNION CONTRACT is a division that deals with the contract supply of various doors, wall panels and furniture for hospitality, offices, medical and other institutions. Thanks to many years of experience and possessing a large-scale production with modern Italian equipment, the company is able to carry out any projects in set terms under efficient proposal and at reasonable prices.

WE OFFER manufacture and supply of:

- Interior doors and partitions of any design up to 3.5 m high
- Entrance and technical doors
- Fire rated doors
- Basic and non-standard cabinet furniture
- Interior decoration with wall panels
- Upholstered furniture
