VIDEO ABOUT  
PRODUCTION

**U UNION**  
DOORS · FURNITURE

1990  
SINCE

*Doors – is our everything*

Doors – is not everything

Not everything ours – are doors

Since 1990 and to this day UNION company has been a market leader in the production of doors and furniture. UNION is always striving for perfection by concentrating its efforts on the search of new ideas, implementation of European quality standards, enlargement of the product range and introduction of the latest trends in both architecture and interior design. As an expert in the development of interior

doors and partition UNION introduced a new comprehensive approach to interior design in 2020. A concept of “Doors and furniture in one style” has been developed upon request by Italian architects in collaboration with UNION. This solution facilitates the implementation of the architects’ ideas for the interior design and guarantees stylistic unity across all elements of the design project.

UNION's production facility was established according to the design of Italian architects based on the latest achievements in the Italian furniture industry.

Our advanced production complex operates on more than 40,000 m<sup>2</sup> and is equipped with modern Italian and German hardware which allows us to fulfill orders of any complexity in the required volume.

Specializing in the implementation of comprehensive interior design solutions, UNION has achieved the highest level of development thanks to its knowledge of Italian door and furniture craft traditions, the use of European experience, technology and equipment, as well as customer needs understanding and the constant products and services improvement.

# Patent UNION

# SIZE MATTERS

Thickness of UNION door  
up to **60 mm**

It's **50%** thicker  
than an standard door

# ADVANTAGES OF ITALIAN TECHNOLOGIES

01

## Always in stock "Invisible" doors ready for painting

Always in stock, ready for quick shipment, unique FILO-60, Fondo doors with 60mm thickness in standard sizes 60/70/80 x 200/210/240 cm.

02

## Important advantage - door leaf thickness

Standard door leaf thickness of other manufacturers does not exceed 4 cm. The leaf thickness of UNION doors is 6 cm! Such doors have better sound insulation and durability. Besides they look more prestigious.

03

## Hidden frame with false box

Concealed INVISIBLE door frame is fully made of aluminum and it is reinforced by additional door frame - an additional secondary profile. That's the main difference between the constructions of UNION concealed door frames and any other standard concealed frames presented in the market. The rigid reliable construction is designed for long and intensive operation even for the heavy doors. Initially the frame is anodized in silver aluminum, but it also can be painted in a wall color or in any other color according to the factory catalogue.

04

## Height up to 3.5 meters

A modern trend, relevant for interiors made in various styles. High doors visually "raise" the ceiling, optically increasing the area and volume of the room. The reinforced construction of the door frame and door panel ensures durability and stability during long-term operation.

05

## Flush to wall

INVISIBLE door frame perfectly integrates into the wall and creates a single plane while opening the door "by pulling" and "by pushing". In addition, it can also be easily connected with the wall panels made of various materials - from wood to glass. In any case it always remains flush to the wall - the unity of the surface with the wall without protruding parts.

06

### Wall thickness

Thin walls made of special materials are used in the construction of some buildings. INVISIBLE frame is perfect for wall mounting from 6 cm thickness. The frame is installed in a thin wall without additional door frame and is fixed via frame profile.

07

### Delivery of the assembled frame

The INVISIBLE hidden frame can be delivered fully assembled. It means that the frame is assembled with fixed mounting bars ready to be installed in the doorway. The installers can only set it vertically and fix it to the slopes opening. Thus the installation becomes faster and easier.

08

### Aesthetic mounting

The INVISIBLE frame design allows you to create a joint with the tiles, the porcelain tiles or other materials directly tightly, without additional transitional elements and visible gaps. Such a technical solution is specifically provided for doors on hidden frame of both internal and external opening.

09

### Support

Longitudinal cuts are designed in the profile of the additional door frame into which the so-called supports are installed. This is a special fastening device that allows you to quickly adjust the position of the frame level during installation and then securely fasten the entire structure. This greatly speeds up and simplifies the installation process. At least 4 supports are installed in each vertical rack of the INVISIBLE door frame (two of them are always provided).

10

### Suitable for standard doorways

According to Russian Government standards, the door's width 60, 70, 80 and 90 cm are standard. As a rule, many builders prepare the doorways exactly in accordance with Government standards. UNION doors are designed so that their geometric dimensions fit into standard openings, which significantly reduces their cost.

11

### Humidity resistance

Aluminum INVISIBLE door frame makes a door humidity resistant comparing to the doors with wood or MDF door frame. UNION doors are not exposed to humidity during the wet cleaning or at the wet floor. They can be used in rooms with high humidity without fear of getting wet of the supporting structure – the door frame.

13

### Solidity of finishing

There is a very interesting and trendy option in UNION – the possibility of factory polymer painting in the same color of all metal elements of the door structures. The solidity of finishing of aluminum tip edge, frame and handles create a unique aesthetic integrity and laconism.

14

### Rabbeted door

UNION produces the unique 6 cm doors with so called rabbet ledge. Sometimes we use the terms "doors with groove" or "framed-and-ledged doors" instead of "rabbeted doors". Thanks to the ledge, the door leaf connects better to the frame that increases the sound and heat insulations. Due to the ledge the door becomes flush at different door handing – "pull opening" and "push opening". The ledge also prevents the light penetration in another room.

12

### Fabricability

INVISIBLE hidden frame are supplied with a special supporting net along the whole aluminum frame perimeter. This is the important detail when a wall is plastered close to the frame and then painted. The net simplifies the plastering process and excludes the cracks of the wall surface.

15

### Aluminum - Low footprint

Aluminum is a natural, eco-friendly and safe material that is not exposed to the environment. Such materials as wooden board, MDF have a number of fundamental defects – they trigger and swell on wetting. There are the doors with PVC elements in a market. This material is very harmful for humans.
